

Reference Contract AP/M/07/1742

Date: 22 September 2008

To: Vladimir Shilenko

I would like to congratulate Azimut Energy Services Crew 05 for the successful completion of the seismic test in June 2008 contract # AP/M/07/1742 for KPO on the Karachaganak oil field.

The noise test was commenced in June and was completed after a contractual period of 25 days. Within the 25 days the crew successfully completed the requested program as set out by KPO with an excellent safety and production performance.

Throughout the campaign the crew management showed a positive and professional attitude towards the logistical and HSSE aspects of the survey and worked diligently to observe the integrated HSSE management systems which are required by KPO to operate within the field boundaries. This is reaffirmed by the excellent safety statistics the crew achieved during the work in conjunction with the excellent production rates which were acquired to fully complete the scope of work as defined by KPO while operating within the oilfield.

All data which was recorded on the crew has now been analyzed and confirmed to be technically sound through an independent verification system.

As the project manager for the works I would like to commend Azimut Energy Services management and all staff of crew 05 for the strong professional attitude in HSSE and logistical management which was shown during the test acquisition in June. I wish you all the best in your future seismic campaigns and company success.

Michael Perrella
Seismic Project Manager
