Congratulation to Azimut Energy Services

I would like to commend and congratulate Azimut Energy Services for their performance on the Kazakhstan 3D high resolution, high production slip sweep seismic program conducted in 2009 over the Karachaganak oil field development. .

A high resolution high productivity 3D seismic survey was undertaken in Kazakhstan in 2009 utilising modern high resolution and high production techniques developed in the international oil industry. The survey was undertaken over the well developed Karachaganak giant oil field.

It is important to understand that the Karachaganak survey presented a unique and difficult set of logistical and geological challenges which required the most advanced technologies to be deployed in one of the most difficult seismic settings due to the oil field infrastructure, local community settlements and sensitive environmental settings. This survey would be a difficult challenge to any seismic contractor in the world.

Azimut Energy Services conducted the work to the highest industry standards which exceeded all expectations of the project. Azimut's performance excelled in the following key areas;

- Exceptional HSSE standards with no LTI statistics for the entire project.
- Utilisation of Industry leading acquisition technologies in both recording and source equipment
- Strong and dedicated management of personnel from the highest level of the Company.
- Dedicated and focussed attention on the Client needs.

Azimut's performance was a major contribution to the project being a success by being completed to the highest HSSE standards, achieving the geophysical objectives, finishing ahead of schedule. It was a pleasure to work on this project with them.

I consider Azimut Energy Services one of the world's leading acquisition contractors in the seismic industry based on their performance on this project and highly recommend their services.
